

I am totally opposed to any effort by ANY government agency to control the freedom of the First Amendment to the US Consitution. I do not know the specific laws regarding this situation, however, I can say this: Satellite Radio Services provide very valuable service to the listening public and I, for one, enjoy the content my satellite service provides. I will not stand for it to be limited or curtailed in any way which violates the First Amendment. This is a desperate attempt by the NAB to limit satellite radio service because it is threatened by their success. I refuse to let the NAB dictate what I can and cannot listen to. There is no reason for the NAB to try and limit the local traffic and weather broadcasts over satellite radio. When will the NAB be suing the Weather Channel on cable tv? They provide me with local weather just as satellite radio does, yet, I do not see the NAB attacking them for providing local weather information. Instead of trying to change their business model and move forward with technology and the current trends, the NAB instead is trying to hold everyone else back right along with them. The NAB have nothing to do with XM or Satellite radio and should NOT be allowed to dictate their content.
